What are the key risks that are specific to the Issuer?

The Issuer and Mediobanca Group is subject to the following key risks:

- The evolution of the macroeconomic scenario could negatively affect the economic and financial situation of the Issuer and/or of the Mediobanca Group, and in particular its liquidity, profitability and capital solidity, leading the Issuer and/or the Mediobanca Group to incur losses, increase the cost of financing and reduce the value of assets held. The Issuer's performance is also influenced by the general economic situation, both national and for the Eurozone as a whole, and by the trend on financial markets, in particular by the solidity and growth prospects of the geographical areas in which the Issuer operate. The macroeconomic scenario currently reflects considerable areas of uncertainty, in relation to: (a) the trends in the real economy with reference to the prospects of recovery and growth in the national economy and/or resilience of growth in the economies of those countries, such as the United States and China, which have delivered growth, even substantial, in recent years; (b) future developments in the monetary policy of the European Central Bank for the Eurozone area, and the U.S. Federal Reserve Board for the US dollar area, and the policies implemented by various countries to devalue their own currencies for competitive reasons; (c) the sustainability of the sovereign debt of certain countries, and the tensions noted more or less frequently on financial markets. In this respect, the outbreak of Covid-19 pandemic, which began in China at the end of January 2020 and expanded globally in a few months, has had and is still having significant negative consequences on the overall scenario and in turn on the Italian banking sector in which the Issuer operates. Furthermore, the measures implemented by the competent authorities, and mainly the Italian Government, on the one side, helped facing the health emergency, while on the other had massive negative consequences in human, social and economic terms. Indeed, such measures led to a reduction in revenues on the majority of the corporate customers, an increase of costs related to the actions necessary to contain and prevent the spread of Covid-19 and, in turn, on the ability to pay existing debt (potentially also vis-à-vis the Issuer) and on current employment levels. Any of such circumstances may have an impact on the Issuer's results and, in turn, on the Issuer's ability to pay remuneration or repay principal repayment amount under the Securities. Despite the actions taken so far by the Italian government, the regulatory bodies of the European Union and the relevant member states to mitigate the negative impacts of the anti-Covid-19 measures and support the economic recovery (including the adoption of the recovery plan named "NextGenerationEU"), significant uncertainties still remain about the evolution, severity and duration of the pandemic. Should the Covid-19 pandemic and the consequent economic crisis situation persist in the forthcoming months, further negative impacts may arise on the Issuer's business situation, also due to the fact that such crisis situation increase the materiality of most of the risks to which the Issuer is exposed to, which are detailed below, and in turn the Group's results and financial condition might be materially adversely affected. In addition, the Russia-Ukraine war started in February 2022 with the invasion of Ukraine by Russia. The extent of the consequences of this war with regard to energy price increases and inflation as a whole on the one hand and trade restrictions and sanctions on the other hand, but also counterreactions and the duration of such a conflict are not foreseeable at this time. This conflict could have significant adverse effects on European economy, the inflation and the stability of international financial markets.
- Fluctuations in interest rates in Italy and in the other markets in which the Mediobanca Group operates influence the Mediobanca

MEDIOBANCA

Banca di Credito Finanziario S.p.A.

Group's performance. The results of each Issuer's banking operations are affected by its management of interest rate sensitivity (i.e. Interest rate sensitivity refers to the relationship between changes in market interest rates and changes in net interest income). A mismatch of interest-earning assets and interest-bearing liabilities in any given period, which tends to accompany changes in interest rates, may have a material effect on the Issuer's financial condition or results of operations.

- The results of the Issuer may be affected by general economic, financial and other business conditions. The risk arising from the impact of the economy and business climate on the credit quality of the Issuer's borrowers and counterparties, including sovereign states, can affect the overall credit quality and the recoverability of loans and amounts due from counterparties. The Issuer is therefore exposed by its very nature to potential changes in the value of financial instruments, including securities issued by sovereign states, due to fluctuations in interest rates, exchange rates and currencies, stock market and commodities prices and credit spreads, and/or other risks.
- The credit and capital markets have been experiencing extreme volatility and disruption in recent months. To the extent that any of the instruments and strategies the Issuer use to hedge or otherwise manage their exposure to credit or capital markets risk are not effective, the Issuer may not be able to mitigate effectively their risk exposures in particular market environments or against particular types of risk. The Issuer's trading revenues and interest rate risk are dependent upon their ability to identify properly, and mark to market, changes in the value of financial instruments.
- The Issuer's investment banking revenues, in the form of financial advisory and debt and equity underwriting fees, are directly related to the number and size of the transactions in which the Issuer participate and may be impacted by continued or further credit market dislocations or sustained market downturns. Sustained market downturns or continued or further credit market dislocations and liquidity issues would also likely lead to a decline in the volume of capital market transactions that the Issuer execute for their clients and, therefore, to a decline in the revenues that it receives from commissions and spreads earned from the trades the Issuer executes for its clients. In addition, particularly during market downturns, the Issuer may face additional expenses defending or pursuing claims or litigation related to counterparty or client defaults.

What are the key risks that are specific to the Securities?

The Securities are subject to the following key risks:

General

- The Securities may not be a suitable investment for all investors. Investors should be aware that they may lose the value of their entire investment or part of it, as the case may be. An investment in the Securities, which are linked to the Underlying References, may entail significant risks not associated with investments in conventional securities such as debt or equity securities. Set out below is a description of the most common risks.

Risks related to the structure of a specific issue of Securities

- The Issuer may, but is not obliged to, list or ask for admission to trading of Securities on a stock exchange or a trading venue. If the Securities are listed or admitted to trading on any stock exchange or trading venue, there can be no assurance that at a later date, the Securities will not be delisted or that trading on such stock exchange or trading venue will not be suspended. The Issuer or any of its Affiliates may, but is not obliged to, be a market-maker for an issue of Securities. However, during certain periods, it may be difficult, impractical or impossible for the entity acting as market-maker to quote bid and offer prices. Even if the relevant Issuer or such other entity is a market-maker for an issue of Securities, the secondary market for such Securities may be limited.
- The occurrence of an Administrator/Benchmark Event may lead to early settlement or adjustment of the Securities, which may include selecting one or more successor benchmarks and making related adjustments to the Securities, including, if applicable to reflect increased costs. An Administrator/Benchmark Event may arise if any of the following circumstances occurs or will occur: (1) a benchmark is materially changed or permanently cancelled, or (2) (i) the relevant authorisation, registration, recognition, endorsement, equivalence decision or approval in respect of the benchmark or the administrator or sponsor of the benchmark is not obtained, (ii) an application for authorisation, registration, recognition, endorsement, equivalence decision, approval or inclusion in any official register is rejected or (iii) any authorisation, registration, recognition, endorsement, equivalence decision or approval is suspended or inclusion in any official register is withdrawn.
- In case certain events, indicated in the terms and conditions and the relevant final terms, occurs with reference to the relevant Underlying Reference(s) or the Securities, the Calculation Agent and the Issuer have broad discretion to make certain determinations to account for such event(s) including to (i) make adjustments to the terms of the Securities and/or (ii) cause early settlement of the Securities, any of which determinations may have an adverse effect on the value of the Securities. The effects of coronavirus pandemic (such as the measures taken by governments and authorities in this respect) may cause the occurrence of the events indicated above and involve such adjustments to the terms of the Securities and/or early settlement of the Securities.

Risks relating to Underlying Reference Asset(s)

- In addition, there are specific risks in relation to Securities which are linked to an Underlying Reference (including Hybrid Securities) and an investment in such Securities will entail significant risks not associated with an investment in a conventional debt

MEDIOBANCA

Banca di Credito Finanziario S.p.A.

security. Risk factors in relation to Underlying Reference linked Securities include exposure to one or more index, adjustment events and market disruption or failure to open of an exchange which may have an adverse effect on the value and liquidity of the Securities.

- The occurrence of an additional disruption event or optional additional disruption event may lead to an adjustment to the Securities early settlement or may result in the amount payable on scheduled settlement being different from the amount expected to be paid at scheduled settlement and consequently the occurrence of an additional disruption event and/or optional additional disruption event may have an adverse effect on the value or liquidity of the Securities.

Risks related to the market generally

- Issue price of the Securities include placement fees. The placement fees shall be paid by the Issuer to the Distributor. Any such fees may not be taken into account for the purposes of determining the price of such Securities on the secondary market and could result in a difference between the original issue price, the theoretical value of the Securities, and/or the actual bid/offer price quoted by any intermediary in the secondary market.

Certain considerations associated with public offers of Securities

- The Issuer has the right under certain conditions to withdraw the offer in relation to the Securities, which in such circumstances will be deemed to be null and void. Investors who have already paid or delivered subscription monies for the relevant Securities will be entitled to reimbursement of such amounts, but will not receive any compensation that may have accrued in the period between their payment or delivery of subscription monies and the reimbursement of such amounts.

Exchange rate risks and exchange controls

- The Issuer will pay amounts on the Securities in the Settlement Currency. This presents certain risks relating to currency conversions if an investor's financial activities are denominated principally in a currency or currency unit (the "Investor's Currency") other than the Settlement Currency. These include the risk that exchange rates may significantly change and the risk that authorities with jurisdiction over the Settlement Currency and/or the Investor's Currency may impose or modify exchange controls.
